

Last Mile Delivery Vehicles

Ride Control Stocking Guide

Gabriel supports Last Mile Delivery Vehicle Applications with extensive ride control coverage designed for fleets.

Worn shocks and struts can cause tire cupping. Tires are a top maintenance expense for fleets. Replacing shocks or struts when tires are replaced can save fleets money by **maximizing the life of new tires!**

Did you know? **Replacing your ride control will also improve fuel economy.**

Shocks and struts keep the vehicle from bouncing around while going down the road and hold tires in contact with the road providing a smooth ride, so the engine does not work as hard to keep the vehicle at a steady speed, improving fuel economy for last mile delivery fleets.

Replacing ride control is also crucial for reducing stress and fatigue, providing **driver comfort to help fleets retain their most valuable asset, their drivers.**

Dodge / Ram
