# Load Carrier™

**Front & Rear Spring Assist Shocks  
Built for Towing & Hauling**

*"Gabriel has created the epitome of what a load carrier shock should be capable of."*

*"The ability of these shocks are nothing short of incredible"*

*"A lot of these shocks' true power lies in its towing ability. The load capacity displayed by these shocks are due to its construction of quality parts."*

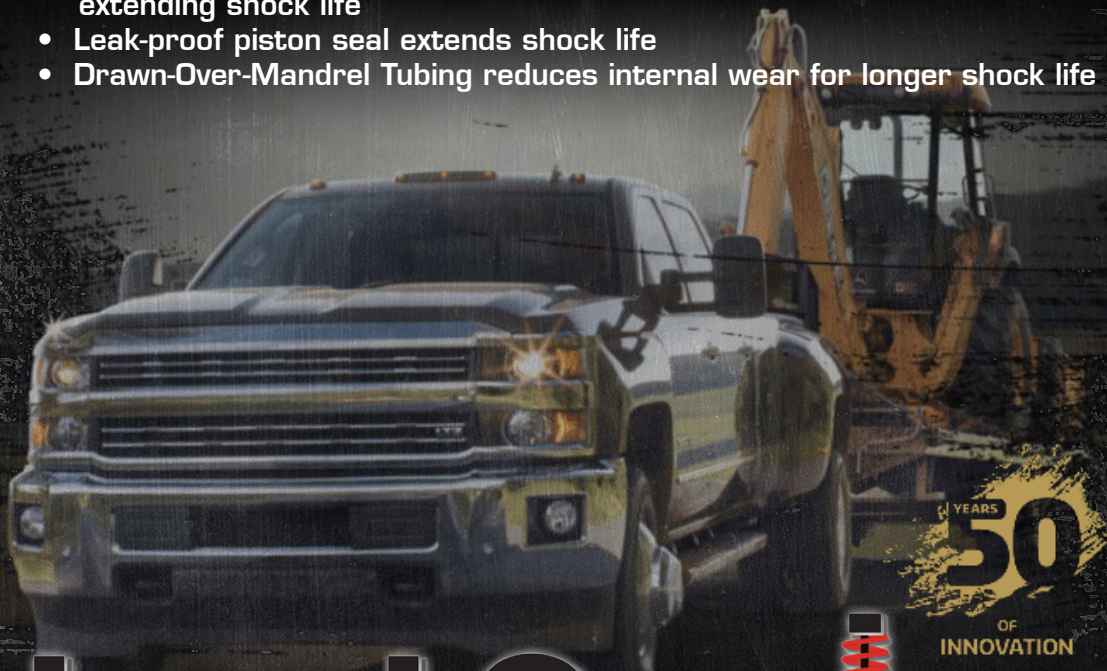

Front & Rear Spring Assist Load Carriers™ by Gabriel® are the perfect combination of shock & spring technology to help reduce the loss of ride height in ongoing loaded conditions.

The constant-rate front coil springs help improve stability and restore or maintain ride height, while the variable-rate rear coil springs provide 500 lbs. per pair of load capacity.

*Front & Rear Spring Assist (Load Carriers™) do not increase vehicle payload. Do not exceed vehicle GVWR.*

**LOAD CARRIERS** by Gabriel give you these superior features for durability:

- Chrome piston rod inhibits corrosion & ensures proper seal lubrication, extending shock life
- Leak-proof piston seal extends shock life
- Drawn-Over-Mandrel Tubing reduces internal wear for longer shock life
