Load Carrier™ Shocks

The Front & Rear Spring Assist (Load Carrier™) by Gabriel® is the perfect combination of shock and spring technology to help reduce the loss of ride height in ongoing loaded conditions. The constant-rate front coil springs can help improve stability and restore or maintain ride height, while the variable-rate rear coil springs provide 500 lbs. per pair of load capacity.

Front & Rear Spring Assist (Load Carrier™) does not increase vehicle payload. Do not exceed vehicle GVWR.

MAX CONTROL™

Our most advanced shock absorber, MaxControl™ shocks go above and beyond other shocks for response, performance, durability, control and reliability. Our advanced monotube technology and rod guide bearing system create unmatched reaction time to bumps and other road imperfections. A larger 1 13/16" (46mm) bore size also increases strut pressure absorption, resulting in greater damping efficiency, quicker response, and the smoothest and safest ride possible.

On paper or pavement, you won't find a more comfortable shock than the Gabriel® MaxControl™ v2.0. Equipped with best-in-class technology, our MaxControl monotube shock is the only choice for those who demand nothing but the very best for their SUV or truck.

LTV™ Commercial Series

Service professionals have vastly different needs for their vehicles, especially their suspensions. So Gabriel® LTV™ shocks are designed and built to handle the demands of the typical fleet – light or heavy – while providing unbeatable stability and response. At its core, each Gabriel LTV shock packs an oversized 1 5/8" (41 mm) piston bore to provide strength and stability that's capable of settling even the most violent shakes, rattles and rolls. The sintered iron piston and compression head are precision engineered to handle the most extreme conditions, while delivering reliable performance and control.

HiJackers® are the original air-adjustable shocks, providing customizable performance and support that can be adjusted and readjusted to handle temporary towing or hauling needs. HiJackers inflate just like your tires – simply air them up prior to towing to help reduce the risk of bottoming out. Once you're done, just let out a bit of air to return the vehicle to its previous state. Whether you need a touch of support or half a ton, you have the power with Gabriel® HiJackers®.
